

Myotonic Goat Registry

Registration Rules and Instructions for MGR *Percentage* Registration Application

Requires current owners signature and MGR membership to be valid

****This form is to be used when registering goats without Two (2) MGR Registered Parents, goats with One (1) MGR Registered Parent, and goats at no greater than 50% myotonic unless documentation of lineage can be provided****

After careful consideration by the MGR BOA, effective 5-1-2022:

1. Goats with one parent registered in the MGR will be registered as 50% myotonic. Goats w/o an MGR registered parent will also be registered at no greater than 50% (unless documentation of lineage can be provided).
2. Goats with a complete pedigree background of registered goats in other registries will be considered on a case by case basis and may be admitted with a percentage Myotonic appropriate for the record; as well as goats with lapses in MGR registration. A \$25 inspection fee will be added to the \$15 electronic registration fee. Goats in this category can only be submitted for registration using the electronic registration method. Goats submitted for review must be submitted by email to MGR.
3. Breeders may petition for exceptions, especially when multiple goats from a single source are considered. Exceptions are granted at the Board's discretion. The Board's decisions will be based on the strength of the history and background of the goat, and of the herd from which it originated. An inspection fee of \$25 will be imposed for Board consideration of the history and type. This is a single fee regardless of the number of goats presented from a single herd and is not imposed on goats individually.
4. Only Does & Wethers will follow these changes. Bucks require both their sire & dam to be MGR registered to be eligible for registration. This in no way affects currently registered goats.
5. These changes take effect 5-1-2022. All paperwork received on or after 5-1-2022 will follow the rules above.

Registration Fees

Does: \$10.00 Wethers: \$8.00

***Inspection fee \$25.00**

(only for goats with a complete pedigree of registered goats in other registries)

***Electronic processing \$15.00 ea (Does and Wethers)**

Please read these explanations carefully to ensure MGR gets correct information in order to safeguard the ancestry of the Myotonic Breed. Goats are registered based on information supplied on this form. Breeders will be held responsible for this information and must be ethical when using this form.

Current Owner's Name: (this is generally the person applying for the registration) and address, etc. are self-explanatory.

Breeder's ID Number: is the number MGR issues to each MGR breeder/member.

Breeder's Herd Name: may be included before the animal's unique name and/or number if one so chooses. Please note: the OWNER of Dam at the time of breeding will be considered the BREEDER of the animal. BUYERS that purchase goats from a SELLER without a Herd Name, or the seller is unknown, shall leave this information blank. If the SELLER'S name is known this can be used. Example: Jim Smith's Mr. Big Stuff ABC. If the purchased animal is bred, the offspring(s) shall also carry the Herd Name of the BREEDER. Goats registered in other organizations shall be registered with MGR using the same identical name. However if the Herd Name is not that of the BREEDER, the TRUE BREEDER of the animal should be listed as the Owner of Dam at time of breeding. Other situations or questions as they occur can be addressed by emailing or calling the MGR office.

Animal's Name: should be the animal's name and/or number.

Herd Suffix: When applying for a Breeder's Number you also apply for a Herd Suffix. MGR selects from your 3 choices and issues your unique Suffix. You then fill in that Suffix on Registration Applications. It is added to the end of the goats name to identify you as the person registering the animal.

Date of Birth, Number in Birth (this includes stillborn kids or those passing shortly after birth) along with **Number of Bucks** and/or **Does** (if known) are self-explanatory. These can be listed as "unk" for unknown.

Percent Myotonic: allows the tracking of goats that are known to have a percentage of outside breeding. This allows these goats and their offspring(s) to be identified and tracked. Goats must be at least 1/2 (50%) or more myotonic to be registered with MGR. The pedigree of offspring(s) of percentage goats should show a progressive upward trend in the myotonic percentage thereafter. Most often this is accomplished by using only purebred bucks on percentage does. Purebred refers to animal(s) that are 100% myotonic. Goats that are 15/16 (94%) or more myotonic are considered purebred.

*Goats being registered using this application with 1 MGR registered parent will be registered at 50%. Goats w/o an MGR registered parent will also be registered at no greater than 50% unless documentation of lineage can be provided.

Sex: shall be checked as Doe or Wether (castrated male) as applicable to the goat.

Horns: Goats are born either horned or polled (hornless). Horned goats can also be disbudded, which means they have had their horns removed. Please check as it applies to the goat.

Eye Color: Be precise but not fancy. Use words like marbled or specked only when needed.

Degree of Myotonia: is an essential part of the breed type but varies per animal. Use the following guide to determine the usage of the numbers 1 through 6:

1. Never observed to stiffen, but other Myotonic type traits (see Breed Description) are consistent as is the pedigree.
2. Very rarely stiffens, never falls.
3. Stiffens occasionally, and rarely falls.
4. Walks normally. However when startled or stepping over a barrier, rear stiffens readily, but forelegs less so, and rarely or only occasionally falls.
5. Walks somewhat stiff in rear and with a swivel at the hip. Readily stiffens and occasionally falls.
6. Walks stiffly in all legs, readily "locks up" and readily falls.

USDA Scrapie Tag #, Microchip #, and/or Tattoos: should be filled in as applicable to the goat. MGR does not require a tattoo or scrapie tag, nor does it require a microchip. However, the USDA has mandated that all goats moved from the owner's property must have a scrapie tag, or in the case the animal is registered, a tattoo with a copy of the registration papers accompanying the animal. Some states allow microchips in place of scrapie tags and/or tattoos. You should check with your state and the state of destination for requirements about transportation and Scrapie rules.

Hair length: (optional) varies within the breed and though this is an optional section, it helps to better identify the goat. Short hair is short in length, generally laying flat against the body producing a smooth coat. Medium hair is medium in length, generally flows from the body as opposed to lying flat. Long hair is long in length and flows downward from the body; and often times the hair nears the ground. Skirted is used to describe goats that have much longer haired areas, generally around the front and/or back legs. Can be checked as applicable to the goat.

Color and Description: Be complete but not overly detailed. It is useful to list the colors present somewhat in the order of their amount. Example: a goat that is predominately black in color but has areas of white, should be described as "black w/white". A goat that is equally black and white should be described as "black & white". A goat that is "black, tan and white" and a goat that is "white, red and black" are both tri-colored goats, but look very different. The goal is to reflect the goat's overall coloration.

Sire's and Dam's Registered Names: are self-explanatory. Their MGR **Registration Number** must be filled in along with the name. **All bucks/bucklings must have 2 MGR registered parents (Sire and Dam) to qualify for Registration.** A buck/buckling can **NOT** be registered if both parents are not registered with the Myotonic Goat Registry. If the sire and/or dam are registered with another myotonic registry/association and their registration names and numbers are known, list them here. If they are not registered, leave this section blank.

Owner of Sire and Dam: are self-explanatory, but please use the persons name not Herd Name.

When selling a registered goat the **original Registration Certificate** and a **Transfer Application** must be furnished to the buyer with all appropriate memos attached. The original Registration Certificate **must be returned** to MGR in order for a new certificate to be issued.

When selling a bred doe, a **Breeding Memo** with the Breeder/Seller's signature must be supplied with the Transfer Application. If the Sire at time of breeding is owned by someone other than the Owner of Dam, a **Service Memo** with the signature of the Owner of Sire shall also be included. When artificial insemination is the form of breeding an **AI Memo** signed by person performing the AI should be furnished.

Deceased goats: When you have a MGR registered goat die, please email, call, or write MGR with notification. This will help maintain a more accurate database. Please include the goat's Registration Number and date of death (if known) with your correspondence; we do not require the return of the Registration Certificate.

Submitting your Registration(s): if submitting by mail, please complete the Registration Application(s) form electronically or by hand (print legibly) with photographs (see below for requirements). If using this method, it is strongly encouraged they are mailed by Priority Mail so you may track the delivery to the MGR office. MGR is not responsible for lost mailings en-route to our office. If submitting electronically, please complete the Registration Application(s) form electronically or by hand (print legibly) and email it along with your photographs to: myotonicgoatregistry@yahoo.com. *Photographs of the Registration Applications taken with a cell phone will be allowed as long as the image is clear and legible*. Electronic processing time is 30-45 days (not guaranteed as a rush).

Photographs: provide additional information to help identify the goat. The goat being registered must appear clearly in the photo with the most identifiable side of the goat shown. A photo with a fence in front of the goat should not be used. (2) Color photos of one side of the goat are required. (2) Color photos of the front of the head straight on is required. This must be a zoomed in photo showing the entire head only. (2) Color photos of the side of the head is required. This must be a zoomed in photo showing the entire side of the head only. Photos of the goats head looking away will not be accepted. The photos should be approximately 2 1/2" x 2 1/2" or smaller to fit the Registration Certificate. If using digital photography and printing them yourself, use quality photo paper in gloss or semi gloss to retain image clarity for many years.
