

Myotonic Goat Registry

Registration Rules and Instructions for MGR *Purebred* Registration Application

Requires current owners signature and MGR membership to be valid

****This form is to be used when registering goats with Two (2) MGR Registered Parents****

Registration Fees

Bucks & Does: \$10.00 Wethers: \$8.00

***Electronic processing \$15.00 ea (Bucks, Does and Wethers)**

Please read these explanations carefully to ensure MGR gets correct information in order to safeguard the ancestry of the Myotonic Breed. Goats are registered based on information supplied on this form. Breeders will be held responsible for this information and must be ethical when using this form.

Current Owner's Name: (this is generally the person applying for the registration) and address, etc. are self-explanatory.

Breeder's ID Number: is the number MGR issues to each MGR breeder/member.

Breeder's Herd Name: may be included before the animal's unique name and/or number if one so chooses. Please note: the OWNER of Dam at the time of breeding will be considered the BREEDER of the animal. BUYERS that purchase goats from a SELLER without a Herd Name, or the seller is unknown, shall leave this information blank. If the SELLER'S name is known this can be used. Example: Jim Smith's Mr. Big Stuff ABC. If the purchased animal is bred, the offspring(s) shall also carry the Herd Name of the BREEDER. Goats registered in other organizations shall be registered with MGR using the same identical name. However if the Herd Name is not that of the BREEDER, the TRUE BREEDER of the animal should be listed as the Owner of Dam at time of breeding. Other situations or questions as they occur can be addressed by emailing or calling the MGR office.

Animal's Name: should be the animal's name and/or number.

Herd Suffix: When applying for a Breeder's Number you also apply for a Herd Suffix. MGR selects from your 3 choices and issues your unique Suffix. You then fill in that Suffix on Registration Applications. It is added to the end of the goats name to identify you as the person registering the animal.

Date of Birth, Number in Birth (this includes stillborn kids or those passing shortly after birth) along with **Number of Bucks** and/or **Does** (if known) are self-explanatory. These can be listed as "unk" for unknown.

Percent Myotonic: allows the tracking of goats that are known to have a percentage of outside breeding. This allows these goats and their offspring(s) to be identified and tracked. Goats must be at least 1/2 (50%) or more myotonic to be registered with MGR. The pedigree of offspring(s) of percentage goats should show a progressive upward trend in the myotonic percentage thereafter. Most often this is accomplished by using only purebred bucks on percentage does. Purebred refers to animal(s) that are 100% myotonic. Goats that are 15/16 (94%) or more myotonic are considered purebred.

Sex: shall be checked as Doe, Buck or Wether (castrated male) as applicable to the goat.

Horns: Goats are born either horned or polled (hornless). Horned goats can also be disbudded, which means they have had their horns removed. Please check as it applies to the goat.

Eye Color: Be precise but not fancy. Use words like marbled or specked only when needed.

Degree of Myotonia: is an essential part of the breed type but varies per animal. Use the following guide to determine the usage of the numbers 1 through 6:

1. Never observed to stiffen, but other Myotonic type traits (see Breed Description) are consistent as is the pedigree.
2. Very rarely stiffens, never falls.
3. Stiffens occasionally, and rarely falls.
4. Walks normally. However when startled or stepping over a barrier, rear stiffens readily, but forelegs less so, and rarely or only occasionally falls.
5. Walks somewhat stiff in rear and with a swivel at the hip. Readily stiffens and occasionally falls.
6. Walks stiffly in all legs, readily "locks up" and readily falls.

USDA Scrapie Tag #, Microchip #, and/or Tattoos: should be filled in as applicable to the goat. MGR does not require a tattoo or scrapie tag, nor does it require a microchip. However, the USDA has mandated that all goats moved from the owner's property must have a scrapie tag, or in the case the animal is registered, a tattoo with a copy of the registration papers accompanying the animal. Some states allow microchips in place of scrapie tags and/or tattoos. You should check with your state and the state of destination for requirements about transportation and Scrapie rules.

Myotonic Line: (optional) helps to identify the different branches of the Myotonic Goat family tree. If a goat is known to have only Tennessee breeding, check Tennessee. If a goat has only Texas breeding, then that should be checked. Goats that are bred specifically for small size should be noted as Mini. Many goats are a combination of these branches, and in that case leave this blank.

Hair length: (optional) varies within the breed and though this is an optional section, it helps to better identify the goat. Short hair is short in length, generally laying flat against the body producing a smooth coat. Medium hair is medium in length, generally flows from the body as opposed to lying flat. Long hair is long in length and flows downward from the body; and often times the hair nears the ground. Skirted is used to describe goats that have much longer haired areas, generally around the front and/or back legs. Can be checked as applicable to the goat.

Color and Description: Be complete but not overly detailed. It is useful to list the colors present somewhat in the order of their amount. Example: a goat that is predominately black in color but has areas of white, should be described as "black w/white". A goat that is equally black and white should be described as "black & white". A goat that is "black, tan and white" and a goat that is "white, red and black" are both tri-colored goats, but look very different. The goal is to reflect the goat's overall coloration.

Sire's and Dam's Registered Names: are self-explanatory. Their MGR **Registration Number** must be filled in along with the name. **All bucks/bucklings must have 2 MGR registered parents (Sire and Dam) to qualify for Registration.** A buck/buckling can **NOT** be registered if both parents are not registered with the Myotonic Goat Registry.

Owner of Sire and Dam: are self-explanatory, but please use the persons name not Herd Name.

When selling a registered goat the **original Registration Certificate** and a **Transfer Application** must be furnished to the buyer with all appropriate memos attached. The original Registration Certificate **must be returned** to MGR in order for a new certificate to be issued.

When selling a bred doe, a **Breeding Memo** with the Breeder/Seller's signature must be supplied with the Transfer Application. If the Sire at time of breeding is owned by someone other than the Owner of Dam, a **Service Memo** with the signature of the Owner of Sire shall also be included. When artificial insemination is the form of breeding an **AI Memo** signed by person performing the AI should be furnished.

Deceased goats: When you have a MGR registered goat die, please email, call, or write MGR with notification. This will help maintain a more accurate database. Please include the goat's Registration Number and date of death (if known) with your correspondence; we do not require the return of the Registration Certificate.

Submitting your Registration(s): if submitting by mail, please complete the Registration Application(s) form electronically or by hand (print legibly) with photographs (see below for requirements). If using this method, it is strongly encouraged they are mailed by Priority Mail so you may track the delivery to the MGR office. MGR is not responsible for lost mailings en-route to our office. If submitting electronically, please complete the Registration Application(s) form electronically or by hand (print legibly) and email it along with your photographs to: myotonicgoatregistry@yahoo.com. *Photographs of the Registration Applications taken with a cell phone will be allowed as long as the image is clear and legible*. Electronic processing time is 30-45 days (not guaranteed as a rush).

Photographs: provide additional information to help identify the goat. The goat being registered must appear clearly in the photo with the most identifiable side of the goat shown. A photo with a fence in front of the goat should not be used. (2) Color photos of one side of the goat are required. The photos should be approximately 2 1/2" x 2 1/2" or smaller to fit the Registration Certificate. If using digital photography and printing them yourself, use quality photo paper in gloss or semi gloss to retain image clarity for many years.

Tattoo: Right Ear	Left Ear	Degree of Myotonia: _____ (Use number 1 thru 6 as per instruction sheet.)	Eye Color:
Myotonic Line: (optional) Tennessee ___ Texas ___ Mini ___	Hair Length: (optional) Short ___ Medium ___ Long ___ Skirted ___		
Color and Description:			

Sire's Registered Name:	Sire's Registration #:
Name of Owner of Sire at time of service:	MGR Breeder's #:

If Sire is not owned by Owner of Dam, a Service Memo signed by Owner of Sire shall be attached.

Dam's Registered Name:	Dam's Registration #:
Name of Owner of Dam at time of breeding:	MGR Breeder's #:

If animal being registered is bred, a Breeding Memo signed by Breeder shall be attached. A copy should be kept to attach to offspring's registration, if the offspring is to be registered at a later date. If AI is the type of breeding a signed AI Memo should be attached.

If this animal is registered with another organization, please list: Organization, Animal's Full Name and Registration #.

You must have an active Myotonic Goat Registry Breeder Number to register a goat or obtain a replacement certificate.

Myotonic Goat Registry, P.O. Box 141, Adger, AL 35006

When providing a check as payment, you authorize MGR to use information from the check to make an electronic fund transfer from your account or to process as a check transaction. Non-sufficient fund (NSF) checks will be processed using FARS (Federal Automated Recovery System). FARS utilizes federal and state laws allowing an electronic fund transfer of a fee from your account if your payment is returned unpaid. Checks must include: Drivers License #, Full Name, Street Address and Phone Numbers.
